Project Proposal Life Expectancy prediction

➢ Abstract:

This project aims to build a linear regression model on the health status , As the model aims to predict

.life expectancy the based on the most important characteristics that affect its

➢ Goal:

The goal of the project is building a model which can predict the life expectancy

➢ Data Description:

Global Health Observatory (GHO) data repository under World Health Organization (WHO) related to life expectancy

will use a dataset   from https://www.kaggle.com/kumarajarshi/life-expectancy-who

consists of 22 Columns and 2938 rows

➢ Tools:

- ➢ Pandas
- ➢ NumPy
- ➢ Seaborn
- ➢ Linear Regression
- ➢ RandomForestRegressor
